

# Sustainability Solutions

## Sustainability Made Smart and Simple

Implementing sustainability programs within an organization can be a challenge. TensorIoT's sustainability solutions simplify improving your sustainability awareness and accelerating the incorporation of technology into your company processes. Our solutions focus on monitoring key sustainability elements including energy and water use, air quality, and carbon footprint reduction, providing situational awareness to rapidly identify and fix wasteful or unsafe conditions.

### Carbon Emissions Tracking & Reporting

- Monitor, track and report carbon emissions across your business, giving you the information needed to implement strategies to reduce overall carbon footprint within your supply chain and manufacturing processes

### Building Emissions Monitoring

- Our expertise in building sustainability monitoring ensures you can quickly implement a meaningful sustainability program. By targeting energy and water usage, and monitoring air quality, you can drive down emissions and reduce your overall carbon footprint.

### Worker Health and Safety

- Ensure that your employees and customers have a safe sustainable workplace by monitoring air quality, sound levels and temperatures with our sensor kit.

### Sustainability Accelerator Kits

- Our low cost Sustainability Accelerator Kits are a one-stop start to your sustainability program, giving you a system that deploys quickly and provides focused monitoring of key areas of your enterprise, providing the foundational data to drive your implementation of a meaningful sustainability program.

### Customized for your business

- With expertise in developing custom solutions for customers on AWS, TensorIoT can tailor a solution that helps create a sustainability program or support existing efforts in your organization
